iViis

viisConnect

Collaboration Platform

Visibility over business processes, intelligent collaboration in the cloud.

All enterprise level organisations are faced with one or more of the following challenges, without exception:

- A lack of visibility across multiple, disparate applications. No single view of the truth
- An inability to report across disparate sources of data
- Difficulty in achieving effective collaboration between stakeholders, both internal and external
- The limitations of existing "*mission critical*" applications. Often adding missing functionality is very expensive, complex and time consuming
- Exposure to risk created by staff managing functionality in an ad-hoc manner using spreadsheets, Sharepoint and other manual methods

viisConnect solves these challenges for all of our clients, regardless of the corporate or government sector they operate in. A truly industry agnostic solution, viisConnect allows clients to maximise the value of existing IT infrastructure while at the same time eliminating risk and enhancing collaboration.

iViis

Smarter business faster

viisConnect

iViis specialise in delivering robust, cost-effective, cloud based solutions that simplify business systems and processes. Enhanced collaboration, reduced risk and increased efficiency and profitability are just some of the benefits that these solutions provide.

All iViis solutions are pre-configured and built on the same product, viisConnect, a proprietary, enterprise level, collaboration platform based in the iViis cloud. Accessible via a secure, role based login using any web-enabled device, all viisConnect solutions feature a consistent, contemporary look and intuitive user experience.

At the heart of viisConnect are three core enabling technologies:

Integrate
Disparate IT Systems

viisConnect is built on the premise that organisations want to maximise the value of their existing IT systems, rather than replace them. viisConnect adds value to the investment already made in "*best of breed*" applications by interfacing with them. Documents stored in any data repository can also be made available in viisConnect.

Automate
Manual Processes & Spreadsheets

Manual systems and processes are automated. Additional functionality can be incorporated if required. Systems and reporting being managed in an ad-hoc manner using spreadsheets or in Sharepoint are transitioned into viisConnect, removing risk and maximising value.
Client specific IP is also embedded, standardising systems and processes.

Extend
Legacy IT Systems

Critical business functions are often managed by legacy ERP systems, however making changes to these systems is usually very expensive and is often put off, the end result being that key functionality is often missing. viisConnect can provide this missing functionality in a highly cost effective solution, enhancing the value of legacy systems and extending their usefulness.

Visibility

viisConnect provides end-to-end visibility of previously siloed information, in a single cloud based application. Each pre-configured solution provides the core functionality needed to deliver the required outcomes but can be customised with workflows and client specific IP to ensure a perfect fit for your organisation.

Flexibility

All viisConnect solutions are implemented in exactly the same manner and are flexible by design. Plug-ins provide key functionality, such as Procurement Management, while apps within plug-ins provide point solution functionality e.g. Receipting. All plug-ins & apps can be implemented seamlessly into any viisConnect solution. This flexibility allows you to implement only the plug-ins you need, when you need them. This library of functionality also means that iviis can create robust, cost effective, bespoke solutions in very short time frames by reconfiguring functionality which is already proven in existing solutions.

viisConnect

Rapid Delivery

The unique architecture of viisConnect means that no coding is required when configuring plug-ins or apps and is a key factor in our ability to deliver complex projects rapidly and in budget.

All customisation is carried out at the plug-in/app level, ensuring your corporate IP is only ever available within your viisConnect community. Custom plug-ins & apps can also be developed as required.

The flexible design of viisConnect means that value can be realised in a very short time frame by identifying plug-ins which provide functionality that can be used as soon as it is deployed. There is no need to wait until the entire solution is "*turned on*" before your stakeholders can start gaining value from a viisConnect solution.

Collaboration

Each viisConnect implementation creates a unique community, or eco-system which enhances collaboration amongst all stakeholders, both internal and external by providing visibility and management capability of all relevant information to the right people, at the right time. An increasing number of clients are choosing to collaborate with other organisations using the secure viisConnect platform in order to realise the full potential that an integrated, cloud based community can provide.

Grow Without Limits

viisConnect allows for an unlimited number of User Roles to be implemented and is fully scalable. Each role is configured to manage security and the visibility of, and rights over information. This flexibility gives users (e.g. employees, contractors, suppliers etc.) their own specific view and rights over all information that is relevant to them. All viisConnect solutions include:

- Unlimited Users
- Unlimited Hours
- Unlimited Data Storage
- Unlimited User Roles
- A powerful reporting engine, and more.

viisConnect is continually being developed, ensuring it will never become a legacy solution. Updates are performed every fortnight on average, while new functionality can be added to your own viisConnect community as it is required. There are no hardware requirements, Users simply need internet access.

The following pages provide an overview of the suite of viisConnect pre-configured solutions and platform features. For details on each solution or to discuss how viisConnect could add value to your business please contact us as follows.

APPS:

Apps available within plug-ins provide point solution functionality.

Existing plug-ins can be customised to deliver specific functionality or bespoke apps can be built if new functionality is required.

*All plug-ins can be implemented seamlessly into any viisConnect™ solution. Not all plug-ins are listed

viisConnect Global Features

In the Cloud: Collaborate in the cloud in real time.

Flexible, Powerful Integration: viisConnect can integrate and web-enable data from any application, database or data repository.

User Friendly Interface: viisConnect features a contemporary interface and intuitive user experience.

Dashboards: Dashboards save time by clearly presenting important, role specific information at a glance. One click drill down to the detail.

Role Based Access: Access to viisConnect is built on role based security principles and is fully scalable. Menus, dashboards and tabs are role specific so each user can only view and interact with the data they have permission to see. An unlimited number of Users and User Roles can be implemented.

Powerful Query & Reporting Functionality: Report across all data available in viisConnect. An extensive range of charts, styles and colour options allows users to create custom reports with the appropriate training.

Workflows: Manage processes efficiently and reduce risk. Workflows can be implemented & adapted as processes change.

Adaptable: As base systems change over time viisConnect can be simply re-configured to reflect the change in source systems.

Document Management: Documents and photos are linked in context. Unlimited document storage. Self service of documents plus locking and version control etc. are available.

Communication Management: Emails, notes, SMS messages, faxes, all linked in context.

Enhanced Collaboration: All employees and external partners have visibility of all information applicable to their role in one application.

Mobile Compatible: Dynamic design, accessible via any internet connected device.

Save Time & Eliminate Risk: Processes currently being managed manually using spreadsheets can be embedded in viisConnect, saving time and reducing risk.

Automate Tasks: Reduce risk and save time by automating tasks such as notifications and updates.

Secure: iviis operates a comprehensive Information Security Management System (ISMS) and is audited annually against the Information Security Management Standard ISO 27001. This is a client requirement (and in some instances their government's prudential regulators) to ensure very high security standards and operating protocols.

Role based access has the capability to mirror existing security roles. viisConnect has the ability to interface with any Single Sign On system that you may have. Many clients use Active Directory and these security roles are used in viisConnect.

Local Support: Offices in Christchurch, Sydney, Auckland, Brisbane, Gold Coast and Hamilton.

Head Office: 329 Durham Street North, Christchurch

Clients Include:

New Zealand based....

Australian based....
